

The new technology is expected to eliminate the costs and energy associated with transporting and disposal of wastes from circuit board etching processes, as well as recover market-grade copper. James Oxley obtained his B.S. and Ph.D. in Physical Chemistry from Imperial College, London University in 1961. Throughout his industrial career he has been active in applied electrochemistry, with particular experience in the areas of advanced batteries, fuel cells, electrochemical capacitors, and electrolytic processing. Oxley Research, Inc., will provide further process and materials validation and optimization to support the design and construction of an engineering prototype by using a pre-prototype electrolytic regenerator to define the system operating conditions to develop initial components designs and system layout for construction of an industrial-scale test regenerator. The proposed project is not eligible for financial assistance under a recent, current or planned solicitation because the funding program, the Energy Related Invention Program (ERIP), has been structured since its beginning in 1975 to operate without competitive solicitations because the authorizing legislation directs ERIP to provide support for worthy ideas submitted by the public. The program has never issued and has no plans to issue a competitive solicitation. This award will be made 14 calendar days after publication to allow for public comment.

Financial Assistance Award: John D. Watts

AGENCY: Department of Energy.

ACTION: Notice of intent.

SUMMARY: The U.S. Department of Energy announces that pursuant to 10 CFR 600.6(a)(2) it is making a financial assistance award under Grant Number DE-FG01-95CE15608 to Mr. John D. Watts. The proposed grant will provide funding in the estimated amount of

\$96,976 by the Department of Energy for the purpose of saving energy through development of the inventor's "Full-Strength Flush-Joint Pipe Connection."

SUPPLEMENTARY INFORMATION: The Department of Energy has determined in accordance with 10 CFR 600.14(e)(1) that the unsolicited application for financial assistance submitted by Mr. John D. Watts is meritorious based on the general evaluation required by 10 CFR 600.14(d) and the proposed project represents a unique idea that would not be eligible for financial assistance under a recent, current or planned solicitation. The new technology reduces the casing weight 27 percent and is expected reduce the volume of dirt and mud from drilling operations by 52 percent. The inventor and principal investigator, John Watts, has patented about 50 technologies and has created joining configurations for high pressure applications, oil field drilling, and cryogenic lines from space vehicles and nuclear reactors.

The proposed project is not eligible for financial assistance under a recent, current or planned solicitation because the funding program, the Energy Related Invention Program (ERIP), has been structured since its beginning in 1975 to operate without competitive solicitations because the authorizing legislation directs ERIP to provide support for worthy ideas submitted by the public. The program has never issued and has no plans to issue a competitive solicitation. This award will be made 14 calendar days after publication to allow for public comment.

FOR FURTHER INFORMATION CONTACT: Please write the U.S. Department of Energy, Office of Placement and Administration, ATTN: Rose Mason, HR-531.21, 1000 Independence Ave., S.W., Washington, D.C. 20585.

The anticipated term of the proposed grant is 24 months from the date of award.

Lynn Warner,

Contracting Officer, Office of Placement and Administration.
